

The 10th Triennial Symposium on Transportation Analysis

G'day!

We welcome you to the Tenth Triennial Symposium on Transportation Analysis (TRISTAN). TRISTAN X will be held 17-21 June 2019 at Hamilton Island, near the Great Barrier Reef off the coast of Queensland in Australia.

The TRISTAN symposium is an opportunity to showcase recent research and applications in transport systems analysis and transportation science.

Earlier TRISTAN symposiums have established a tradition of a symposium of high scientific quality, with lots of inter-action during and outside the technical sessions, a good sense of community, and enriching and enjoyable social activities.

We are expecting well over 100 academics, researchers and practitioners from around the world to convene to discuss models, methodologies and computational results, and to exchange ideas on advanced applications and technologies in transportation. We hope you can join us!

We welcome extended abstracts of research to be presented at TRISTAN X. More details on topics, submission format, and deadlines are available at the TRISTAN 2019 web site.

17-21 June 2019

Hamilton Island

Hamilton Island is located just off the east coast of Australia, among the Whitsunday Islands. These islands are ideally situated between the mainland and the Great Barrier Reef, allowing easy access to beautiful locations along the Reef.

Access to Hamilton Island is easy, with multiple non-stop flights daily directly to Hamilton Island from both Brisbane and Sydney.
