

The 10th Triennial Symposium on Transportation Analysis

TRISTAN X

We welcome you to the Tenth Triennial Symposium on Transportation Analysis (TRISTAN). TRISTAN X 17-21 June 2019 at Hamilton Island, near the Great Barrier Reef off the coast of Queensland in Australia.

17-21 June 2019

Hamilton Island

The TRISTAN symposium is an opportunity to showcase recent research and applications in transport analysis and transportation science.

Hamilton Island is located just off the east coast of Australia, among the Whitsunday Islands. These islands are ideally situated between the mainland and the Great Barrier Reef, allowing easy access to beautiful locations along the Reef.

Earlier TRISTAN symposiums have established a tradition of a symposium of high scientific quality, with lots of inter-action during and outside the technical sessions, a good sense of community, and enriching and enjoyable social activities.

Access to Hamilton Island is easy, with multiple non-stop flights daily directly to Hamilton Island from both Brisbane and Sydney.

We are expecting over 100 academics, researchers and practitioners from around the world to convene to discuss models, methodologies and computational results, and to exchange ideas on advanced applications and technologies in transportation.
